

DAHAM NAVINDA

DevOps/ Cloud Engineer

Auckland, New Zealand | 0223184667 | navindabc@gmail.com | gtihub@DahamDev | linkedin@dahamne

DevOps engineer with 4+ years of experience deploying and managing critical applications. Proven expertise in building robust, scalable solutions using Java, Spring Boot, and Python. Expert in cloud architecture with AWS and container orchestration using Kubernetes. Strong background in DevOps practices and continuous delivery pipelines. Track record of delivering mission-critical financial applications while ensuring high performance, security, and reliability.

PROFESSIONAL EXPERIENCE

Amazon Web Services

Auckland New Zealand

Cloud support engineer (Kubernetes and container service)

2024-Present

- Help organizations to deploy and manage their containerized workloads on AWS cloud mainly on **Elastic Kubernetes service** (EKS), **Elastic container service** (ECS) and integrating monitoring solutions such as **Prometheus** and **X-Ray**.
- Investigate **critical production issues** and help organizations mitigate them and provide root cause analysis.
- Advised customers with design decisions and best practices.
- Developed a system to automatically summarize on going tickets using generative AI models. Integrated this with AWS case handling system to evaluate engineer's customer engagement and provide feedback to improve customer satisfaction. Utilized services such as AWS Bedrock, Lambda, DynamoDB and SQS.
- Contributed to AWS public documentations and blogs.
- Led organization-wide quality initiatives as Quality Champion, resulting in enhanced customer satisfaction scores

Technologies: Kubernetes, Docker, Focused mainly on AWS services such as EKS, ECS, ELB, EC2, VPC, EFS, EBS

Zero Beta

Colombo, Sri Lanka

Senior Software engineer

2023-2024

Software engineer

2022-2023

- Worked on company's core financial risk management product suit and engineered high-performance backend features for market data and risk calculations, reducing system latency from 1000ms to 10ms.
- Developed REST and WebSocket APIs for real-time financial data processing
- Established robust unit testing frameworks and enforced clean code practices through regular code reviews.
- Built scalable microservices using Java 11 and Spring Boot with Kafka messaging.
- Leveraged Redis caching and MySQL databases for optimized data management.
- Architected and implemented an automated release management workflow resulting in 10x faster deployment cycles. This could bring the product new version release time from few 4 hours to less than 30 minutes.
- Maintained microservices deployed in AWS EKS cluster.
- Automated cloud infrastructure provisioning using AWS CloudFormation, and bash scripts.

Technologies: Java, Kafka, Python, Bash scripting, AWS cloud formation, IAC, Kubernetes, Kafka.

Axiata Digital Labs

Colombo, Sri Lanka

Software engineer

2021-2022

- Worked with a large telecommunication provider to modernized their legacy monolithic applications in to micro services following good coding practices and latest technologies.
- Migrated applications from on premises kubernetes cluster to AWS EKS cluster following a migration of 10 million user data from on prem Oracle database to an AWS RDS MySQL Database. Planned and performed the end-to-end data migration following a canary deployment of the new system with minimum data and revenue loss.

- Implemented CI/CD pipelines to automate the deployment processes.
- Developed micro service/ APIs to handle critical transactions using Java 8 and spring boot.

Domain – Telco operations

Technologies: Java, Kafka, Jenkins, MySQL, Kubernetes, EKS, bash scripting

LICENCES AND CERTIFICATIONS

AWS Certified solution architect associate.

Cisco certified network administrator (CCNA)

SKILLS

Programing languages – Java, python, java script

Cloud technologies – AWS

Message brokers – Kafka, AWS SQS and SNS

Version controlling – Git

Front end development: React

Web frameworks – Spring boot, Fast API

Container orchestrations – Kubernetes and Docker

Database – MySQL, PostgreSQL, MongoDB, DynamoDB

IAC tools – Cloud formation, Terraform, CDK

EDUCATION

University of Moratuwa

BSc. Eng (Hons) Electronic and Telecommunication Engineering

Sri Lanka

2017-2021

PROJECTS

- A. Real time activity recognition and user authentication using passive WIFI. Using machine learning models to authenticate users and their activities using Wi-Fi Signals. Developed a web dashboard to show real-time predictions.
- B. Developed the MVP for a student community building startup – [studentpod.co](#). Designed the overall platform UI/UX. Developed both front end and the back-end services. Collaborated closely with product owners to translate design requirements into code, seamlessly bridging the gap between vision and implementation. Led and mentored two talented intern software engineers to deliver impactful results. Technologies used: React, Redux, Python, Fast API, MongoDB
- C. SNAPIT - a real time attendance logger for institutions. Developed an NFC based attendance login platform to help institutions prevent the spread of covid-19 outbreak and monitor. Developed web applications for users to register and institutions to monitor and manage attendance.
- D. I enjoy writing articles about new technologies and interesting information I learn during my day to day to work. Articles: <https://medium.com/@dahamne>
